Executive Summary

1 High-Level Overview

OVERVIEW	
Project Name	Ninety
Project Type	Frontend
Total Test Cases	35
Base URL	https://ninety-coral.vercel.app/
Pass / Fail / Blocked	Frontend: 35 Passed / 0 Failed

2 Key Findings

Test Summary

This frontend run looks very strong: all 35 executable user-flow tests passed, with no failures or blocked cases. The suite covered allowance calculations, trip CRUD, persistence, navigation, validation, EES comparisons, and letter drafting, and every scenario matched the expected behavior. Because there were no Blocked tests, the score is based on the full executable set rather than a partial subset. The result suggests the app is stable across the tested journeys and that the core user experience is consistent, including edge cases like leap days, same-day re-entry, and 90-day planning limits.

What could be better

There are no failing or blocked tests to diagnose, so there is no concrete defect pattern to call out from this run. The only caution is that a passing suite does not guarantee untested areas are healthy; the current evidence is limited to the scenarios covered here. If anything regresses, the most likely places to watch are date handling, trip persistence/editing, and letter generation, because those are the most behavior-heavy flows exercised by the suite. At present, though, the observed quality is high and no endpoint or UI mismatch was detected.

Recommendations

Treat this build as healthy and keep it under regression monitoring. If you want to harden confidence further, expand coverage around any untested edge cases in trip editing, allowance recalculation after multiple edits, and navigation on smaller screens. Otherwise, no immediate product fix is required from this run. Re-run the same suite after the next change set to make sure the passing flows remain stable; the test titles are already suitable for grep-based rechecks. See the fixPrompt panel for a copy-ready note, though it should be empty because no actionable defects were surfaced.

Frontend UI Test Results

1 Test Coverage Summary

This report summarizes the frontend UI testing results for the application. TestSprite's AI agent automatically generated and executed tests based on the UI structure, user interaction flows, and visual components. The tests aimed to validate core functionalities, visual correctness, and responsiveness across different states.

CATEGORY	TEST CASES	PASS/FAIL RATE
	33	33 Pass / 0 Fail
Ninety	2	2 Pass / 0 Fail

> **Note**
> The test cases were generated using real-time analysis of the application's UI hierarchy and user flows. Some visual and functional validations were adapted dynamically based on runtime DOM changes.

2 Test Execution Summary

TEST CASE	TEST DESCRIPTION	IMPACT	STATUS

A demo scenario carries to the EES check with the same numbers		High	PASSED
EES: only the post-cutoff stay is compared		High	PASSED
EES comparison flags a 26-day gap		High	PASSED
Add a trip manually: 2026-09-01 to 2026-09-10 is 10 days used		High	PASSED
Parity page shows 14/14 match with 14 rows	The /parity page proves agreement with the official calculator.	High	PASSED
A leap-day stay drops out of the window on day 181		Medium	PASSED
EES: a stay that began before 10 April 2026 is left out		High	PASSED
A legal planned trip fits		Medium	PASSED
EES: an earlier exit is not called a missing entry		Medium	PASSED
Phone width: every page is reachable from the navigation		Medium	PASSED
Dates in MM/DD/YYYY are rejected with a clear message		Medium	PASSED
Cutoff card explains 10 April 2026 and loads its example		Low	PASSED
Trip sheet takes focus, makes the page inert, and gives it back		Low	PASSED
Letter states Article 52(1)–(5) accurately		Medium	PASSED
Scenario gallery cards open the history they describe		Medium	PASSED
A date that does not exist is rejected with that reason		Medium	PASSED
Rolling window: old days drop out on a later date		High	PASSED
Open stay: counted through today		High	PASSED
Letter: missing fields are named, and no letter is drafted		High	PASSED
Unknown address: 404 page leads back to every page		Low	PASSED

/proof lists every rule with its tests		Medium	PASSED
EES: a missing exit is found and its days listed		Medium	PASSED
Exit before entry is rejected with a specific message		Medium	PASSED
Letter from a demo scenario states the three figures		High	PASSED
Open stay: a plan past day 90 does not fit		High	PASSED
A trip without an entry date is rejected		High	PASSED
Example trips give 64 days used and 26 left	Loading the example itinerary shows 64 of 90 days used.	High	PASSED
Overstay scenario: the exact overstay days are named		High	PASSED
Planner: 'Use latest exit' turns a failing plan into one that fits		High	PASSED
Article 52 letter is drafted with the counts and the 45-day reply		High	PASSED
Deleting a trip can be undone and the same trip comes back		Medium	PASSED
Open stay: exit on day 90 fits, day 91 does not		High	PASSED
Same-day exit and re-entry counts the day once		High	PASSED
Ninety			
Trips persist after reloading the page	Validates that saved trips persist in localStorage and remain available after a page refresh.	High	PASSED
Edit an existing trip and recalculate the allowance	Validates that an existing trip can be edited and the calculator recalculates the 90/180-day allowance.	High	PASSED
